The graph of the inequality $(x \geq 3)$ is very much like the graph of $(x > 3)$, but now we need to show that 3 is a solution, too. We do that by putting a bracket at $(x = 3)$, as shown in Figure $(\text{PageIndex}\{2\})$. Figure $(\text{PageIndex}\{2\})$: The inequality $(x \geq 3)$ is graphed on this number line.

Indicating the solution to an inequality such as $x \geq 4$ can be achieved in several ways. We can use a number line as shown in Figure 2.7. 2. The blue ray begins at $x = 4$ and, as indicated by the arrowhead, continues to infinity, which illustrates that the solution set includes all real numbers greater than or equal to 4.

Graph the following system of linear inequalities. $y \geq (1/2)x + 1$, $y \leq 2x - 2$, $y \geq -(1/2)x - 3$. Solution. This system of inequalities has of three equations which are all connected by an "equal to" symbol. This tells us that all the border lines will be solid. The graph of the three inequalities is shown below.
