## 8 3 Practice Special Right Triangles Answers

Right here, we have countless books 8 3 practice special right triangles answers and collections to check out. We additionally manage to pay for variant types and as well as type of the books to browse. The good enough book, fiction, history, novel, scientific research, as without difficulty as various extra sorts of books are readily within reach here.

As this 8 3 practice special right triangles answers, it ends taking place brute one of the favored ebook 8 3 practice special right triangles answers collections that we have. This

8-6, draw a 30-60-90 triangle using an equilateral triangle. Proof of Theorem 8-6 For 30-60-90  $\triangle WXY$  in equilateral  $\triangle WXZ$ ,  $XY$  is the perpendicular bisector of  $WZ$ . Thus,  $XY = XZ = XW$ , or  $XW = 2XY = 2s$ . Also,  $XY^2 + YW^2 = XW^2$  Use the Pythagorean Theorem.  $s^2 + YW^2 = (2s)^2$  Substitute  $s$  for  $XY$  and  $2s$  for  $XW$ .

## Practice B Applying Special Right Triangles

8.3 Special Right Triangles 4 March 09, 2013. In a 45-45-90 triangle, the hypotenuse is  $\sqrt{2}$  times a leg. We can use these relationships to write proportions comparing every 45-45-90 triangle to a "rule triangle" for 45-45-90. "Rule" triangle for 45-45-90 triangles. In a 30-60-90 triangle, the hypotenuse is twice as long as the shorter leg, and the longer leg is  $\sqrt{3}$  times as long as the shorter leg.
