Advanced Macroeconomics II - KU Leuven

Syllabus for MA Macroeconomics (ECON 41990) Overview This course covers macroeconomic theory. The course reviews basic Keynesian macroeconomic theory before moving on to more advanced topics such as rational expectations modelling and the theory of long-run growth. Many of the topics may be familiar to you from undergraduate macroeconomic classes but there will be a stronger focus here on using mathematical techniques to derive models and explore their implications.

Syllabus for MA Macroeconomics (ECON 41990)

This course will focus on fundamental tools of modern macroeconomic analysis. Specifically, recursive methods and their uses in stochastic applied general equilibrium theory. These uses include applications of both life-cycle and infinite horizon frameworks to savings and consumption, economic growth, fluctuations, and financial markets.

The course is organized around the following empirical exercise. Beginning with a model environment, a non-linear expectational system of difference equations is derived using Bellman's Principle of Optimality. The system is then approximated (using linear and non-linear representations), taking the form of a state-space representation.
