The USS George H.W. In January 1911, he landed on the cruiser USS Pennsylvania, whose fantail had been partly covered by a temporary deck equipped with what we might now call arresting gear ropes, and later took off again from the same deck.

THE HISTORY OF AIRCRAFT CARRIERS An aircraft first flew from a ship's deck in 1910, just four years before the outbreak of World War I, and within nine years of that inaugural flight, the first true aircraft carrier was at sea, with planes designed to reconnoitre, protect the fleet and torpedo the enemy.

In the post-1945 era, the aircraft carrier has remained a valued weapon despite the development of nuclear weapons, cruise and ballistic missiles, and highly capable submarines. At times, as in the early days of the Korean and Vietnam Wars and in the Falklands conflict, carriers alone could deploy high-performance aircraft to the battlefield. In other operations, such as enforcing the no-fly zones and the U.S. invasions of Afghanistan and Iraq, only carriers could provide the bases needed for sustained combat and support operations. This second volume of Norman Polmar's landmark study details the role of carriers in the unification of the U.S. armed forces and strategic deterrence, fiscally constrained Great Britain, the development of British Commonwealth and ex-colonial navies, and the efforts of France and the Netherlands to rebuild their fleets. The role of the modern carrier-nine nations currently possess them-is discussed, as are the issues confronting nations that might acquire them. Chapters on the Soviet Union's effort to produce carriers are included for the first time. The development of both carrier planes and the many "oddball" aircraft that have flown from carriers-such as the U-2 spy plane-are also examined. Appendixes include comprehensive data on all carriers built and converted through 2006. This volume is a valuable companion to the critically acclaimed Volume I, which covers aircraft carrier development and operations from 1909 to 1945.

Traces the development of the designs of aircraft carriers from 1917 to the present and examines the role of the carrier in the United States Navy

"An illustrated history of the aircraft carrier, from World War I through World War II, the Cold War, and today"--

The Imperial Japanese Navy was a pioneer in naval aviation, having commissioned the world's first built-from-the-keel-up carrier, the Hoshō. Throughout the 1920s and 1930s, it experimented with its carriers, perfecting their design and construction. As a result, by the time Japan entered World War II and attacked the United States at Pearl Harbor in 1941, it possessed a fantastically effective naval aviation force. This book covers the design, development and operation of IJN aircraft carriers built prior to and during World War II. Pearl Harbor, Midway and the first carrier vs carrier battle, the battle of the Coral Sea, are all discussed.

This book is a meticulously detailed history of British aircraft-carrying ships from the earliest experimental vessels to the Queen Elizabeth class, currently under construction and the largest ships ever built for the Royal Navy. Individual chapters cover the design and construction of each class, with full technical details, and there are extensive summaries of every ship's career. Apart from the obvious large-deck carriers, the book also includes seaplane carriers, escort carriers and MAC ships, the maintenance ships built on carrier hulls, unbuilt projects, and the modern LPH. It concludes with a look at the future of naval aviation, while numerous appendices summarise related subjects like naval aircraft, recognition markings and the circumstances surrounding the loss of every British carrier. As befits such an important reference work, it is heavily illustrated with a magnificent gallery of photos and plans, including the first publication of original plans in full colour, one on a magnificent gatefold.??Written by the leading historian of British carrier aviation, himself a retired Fleet Air Arm pilot, it displays the authority of a lifetime's research combined with a practical understanding of the issues surrounding the design and operation of aircraft carriers. As such British Aircraft Carriers is certain to become the standard work on the subject.

Adm. James Holloway describes this book as a contemporary perspective of the events, decisions, and outcomes in the history of the Cold War--Korea, Vietnam, and the Soviet confrontation--that shaped today's U.S. Navy and its principal ships-of-the-line, the large-deck, nuclear-powered aircraft carriers. Without question, the admiral is exceptionally well qualified to write such an expansive history. As a carrier pilot in Korea, commander of the Seventh Fleet in Vietnam, Chief of Naval Operations in the mid-1970s, and then as a civilian presidential appointee to various investigative groups, Holloway was a prominent player in Cold

War events. Here, he casts an experienced eye at the battles, tactics, and strategies that defined the period abroad and at home. Holloway's first-person narrative of combat action conveys the tense atmosphere of hostile fire and the urgency of command decisions. His descriptions of conversations with presidents in the White House and of meetings with the Joint Chiefs in the war room offer a revealing look at the decision-making process. Whether explaining the tactical formations of road-recce attacks or the demands of taking the Navy's first nuclear carrier into combat, Holloway provides telling details that add valuable dimensions to the big picture of the Cold War as a coherent conflict. Few readers will forget his comments about the sobering effect of planning for nuclear warfare and training and leading a squadron of pilots whose mission was to drop a nuclear bomb. Both wise and entertaining, this book helps readers understand the full significance of the aircraft carrier's contributions. At the same time, it stands as a testament to those who fought in the long war and to the leadership that guided the United States through a perilous period of history while avoiding the Armageddon of a nuclear war.

Lake Michigan's Aircraft Carriers is the story of the USS Wolverine and the USS Sable, two Great Lakes excursion ships converted for use as aircraft carrier training during World War II. Through the duration of the war, the United States Navy qualified 17,800 pilots for aircraft carrier operation. Training the pilots on either the Atlantic or the Pacific Ocean would have exposed the training ships to the danger of submarine attack, while requiring the escort of fighting ships that were needed elsewhere. It would also have involved arming and armoring the ships used for training. Commander R.F. Whitehead came up with an idea that solved all of these problems. He suggested doing the training on the protected waters of the Great Lakes. The USS Wolverine and the USS Sable were chosen and thus became the only fresh water, paddle-wheeled, coal-fired aircraft carriers in the history of the world. Author Paul M. Somers shares his collection of vintage photos and a lifetime of research to detail the history of these two great vessels—from their life as cruise ships to their contributions to the war effort and then to their eventual scrapping.

In 1922 the US Navy commissioned its first small experimental aircraft carrier. This was followed into service by two much larger and capable carriers in 1927 with five more being built prior to the Japanese attack on Pearl Harbor including three large Yorktown class.??To take the offensive against the Japanese Navy, the American Congress funded by far the largest carrier building programme in history based on the Essex class, a larger version of the pre-war Yorktown vessels. Of the twenty-six ordered, fourteen were commissioned in time to see Second World War service. These were joined by many smaller classes of carriers, including light carriers and escort carriers.??Post-war ever larger and more capable carriers were commissioned. Since 1975, when the first of a fleet of ten nuclear-powered Nimitz class carriers was commissioned, they have epitomized United States superpower status and worldwide power projection. These are due to be replaced in the decades to come with the even more sophisticated nuclear-powered Gerald R. Ford class.??Compiled and written by Michael Green, Aircraft Carriers of the United States Navy contains superb images of all the different types of classes of carriers employed by the US Navy since 1922. These and its highly informative text and captions give the reader a broad overview of this fascinating subject.

Aircraft carriers were the US Navy's principal weapon against Japan during the Pacific War. Development of the Essex class began in 1939, becoming the largest class of carrier ever to be built. Early in the Pacific War it became renowned for its 'Sunday Punch' of 36 fighter planes, 36 dive bombers, and 18 torpedo planes. Alongside the lighter Independence class, these carriers formed the formidable Fast Carrier Force in the Pacific. Featuring artwork detailing the interior and exterior features of the ships, this book explores their design, development, and the action they saw in the Pacific, including the climactic battles of Philippine Sea, Leyte Gulf, and Okinawa.
