Artificial nutrition is the delivery of a patient's nutritional support in a fashion that does not require the patient to chew and swallow. This can be given with total parenteral nutrition (TPN) or through a nasogastric tube (NG tube) or gastrostomy tube (G-tube or PEG tube).

Benefits and Risks of Artificial Nutrition or Hydration

Read PDF Artificial Nutrition And Support In Clinical Practice

People and/or their carers managing their artificial nutrition support need to be able to prevent and quickly recognise any adverse changes in their wellbeing that could be linked to their nutrition support. This includes their nutrition delivery system and storage of feed before administration.

Nutrition support in adults - NICE

The practice of enteral and parenteral nutrition support has evolved significantly in recent years, in response to an increasing number of basic, preclinical, and clinical investigations in the field. This text by Payne-James et al. provides a comprehensive, practical, and state-of-the-art textbook that should be useful to multidisciplinary ...

Artificial Nutrition Support: In Clinical Practice ...

Abstract. Artificial nutritional support is needed when a patient is unable to absorb sufficient nutrition from normal diet. NICE guidance recommends that enteral and parenteral nutrition is supervised by a multidisciplinary nutrition team and that clear goals of nutritional support are defined and reviewed regularly.

Artificial Nutrition And Support In Clinical Practice

If you cannot eat or drink enough to maintain your weight, your doctors or dietitian may suggest artificial nutritional support. This is when nutrients are delivered into your body through a tube (artificial feeding), either into the gut or into a vein. It can be used to help people who are not able to eat or drink in the usual way.
