Smart contracts are computer programs which allow for the automatic transfer of digital assets between parties based upon pre-specified conditions. Smart contracts have been used primarily in association with cryptocurrencies. The most prominent smart contract implementation is the Ethereum blockchain platform, which also calls them decentralized applications, or dApps.

## *What are Smart Contracts? - Blockchain Expert*

Smart contracts eliminate the need of any third party and form the basis of trustworthy and transparent contracts stored inside the blockchain. Many projects and solutions have been developed based on a smart contract to revolutionize every industry in the market – from healthcare to real estate deals.
