Design principles of Jigs and Fixtures. Jigs and Fixtures. The art of metalworking has a primary concern, which is locating the part to be machined relative to the platform. A CNC machine starts machining at a specific point corresponding to the fixture and proceeds from there. Therefore, the preciseness with which a job is machined is very dependent on the accuracy with which it is held in the fixture. Accurate locating of every part loaded into the fixture is essential.

Design principles of Jigs and Fixtures

Main elements of jigs and fixtures are: Body: It is a plate, box or frame type structure in which the components to be machined are located. It should be quite sturdy and rigid.
