shut down and we become unconscious to the outside world.

Life after death: Scientist explains what ACTUALLY happens ...

When a person is dying, their brain is still very active. However, they may become confused or incoherent at times. This may happen if they lose track of what is happening around them. A person...

Signs of death: 11 symptoms and what to expect

Everyone's experiences are different, but there are changes that sometimes happen shortly before a person dies. These include loss of consciousness, changes to skin colour, and changes to breathing. Read more on our page, final moments of life.

End of life signs | Last weeks and days

During the dying process, the body's systems shut down. The dying person has less energy and begins to sleep more and more. The body is conserving the little energy it has, and as a result, needs less nourishment and sustenance. In the days (or sometimes weeks) before death, people eat and drink less. They may lose all interest in food and drink, and you shouldn't force them to eat.

What happens during the dying process? | HowStuffWorks

What happens when you die? Smaller appetite. A person's appetite might dip for various reasons. Their body might be producing more catecholamine, a... Moving slowly. Diminished energy can cause a person to slow down. For example, they may move, talk and think more slowly... Slipping away. When a ...

What happens when you die? | Live Science

The last days or hours of a person's life is often called the terminal phase or dying phase. It might be referred to as when someone is 'actively dying'. It may last for hours or for several days. Everyone's experience of dying is different, and some people will die suddenly or unexpectedly.

Signs that someone is dying

The dying person may experience reduced appetite and weight loss as the body begins to slow down. The body doesn't need the energy from food that it once did. The dying person may be sleeping more now and not engage in activities they once enjoyed. They no longer need food nourishment.

How to Recognize When Your Loved One Is Dying

Medical experts have long debated what happens when a person dies, with anecdotal evidence of bright lights or sensations, and films such as Flatliners exploring the unknown. People who have been...

We lose our sense of self. Because the brain's blood supply comes from underneath, the brain "tends to die from the top down, claiming our most human characteristics first," Dr Cameron said ...

This is what happens in the 30 seconds before you die ...

A dying person often starts to withdraw from the news, some activities and other people, to talk less or have trouble with conversation, and to sleep more. This all ties in with a drop in energy ...

Dying explained: What happens as we die?

Nearer the end, the dying person may increasingly drift in and out of consciousness. ? Appetite reduces: the body knows it no longer needs fuel to keep it going so those who are dying often lose their desire to eat or drink. They can begin to lose weight, sometimes rapidly.

Signs that death is near | Dying Matters

The first stage, known as clinical death, occurs when a person's heart stops beating. About four to six minutes later, brain cells start to die from the loss of oxygen and biological death occurs....

10 Things Your Doctor Won't Tell You About Dying ...

When someone dies a natural death (not by accident or sudden cause), they aren't alive one moment and dead the next. Natural death and dying is a process in which a person gradually transitions from one state to the other. Just as no two people are born in the same way, no two deaths are alike, either.

What happens during the death and dying process ...

What happens to your body after you die? Medically speaking, death happens in two stages. The first, clinical death, lasts for four to six minutes from the moment a person stops breathing and the...

What happens when you die? Life after death according to ...

We often think of the moment of death as that time at which the heartbeat and breathing stop. We are learning, however, that death isn't instant. Our brains are now thought to continue to "work" for 10 minutes or so after we die, meaning that our brains may, in some way, be aware of our death. The research, however, is only very preliminary. 1 ?
