Ford 4D diesel engine with exposed fuel injection pump drive. On the 4D engine, either a nylon or a rubber coupling will be found as an injection pump drive shaft coupling. The injection pump drive exits the block from the timing gears, through the aforementioned coupling to the injection pump as shown in the picture below.

The Ford D series is a range of middle-weight trucks that were introduced by Ford UK in 1965. It replaced the Thames Trader and appears to have been envisaged as a more modern competitor to the Bedford TK produced by General Motors' UK truck subsidiary.. In 1965 the range covered rigid trucks with gross weights from 5.2 to 12.75 British tons, and tippers from 10.8 to 12.75 tons.

Find the engine, casting, or part number. Ford places the part number in various locations, depending on the engine. Common locations include the rear of the engine, near the starter mount and bellhousing, on the front of the block's right side (when looking at it from the front), on the left side of in-line-cylinder engines, or by the oil filter mount.
