approached from the point of view of what medical students need to know in order to understand the clinical work they will eventually be doing. Includes a great variety of self-assessment, to reinforce the messages and to test understanding – and to help students prepare for exams. Concise synoptic (not telegraphic text). Appropriate self-assessment material. Only covers core, so student knows the whole book is essential. Includes key objectives. Contains simple and memorable diagrams for reproduction in exams. Ideal for learning as well as examination review, specifically trying to stimulate the student into assessing his/her own knowledge. The books in the series both complement other

This highly acclaimed textbook is written specifically for students of medicine and related health science subjects. It progresses from a review of general pathology principles and disease mechanisms through detailed discussions of the pathologic entities associated with each organ system. Nearly 700 full-color photographs and pathology slides bring the content to life. The fifth edition features extensive updates throughout to reflect the latest discoveries in cellular and molecular pathology, and offers a web site that presents self-assessment material and

including: 'He's just not himself anymore' and 'My leg gave way'. Each case history takes form of a narrative interrupted by questions with the relevant answers alongside. With its problem-based approach, it helps students appreciate the correct path to diagnosis of the pathological signs and symptoms. An excellent revision companion, each case has a revision box of key topics linked in to the main textbook so the student can refer to it for more details. Although the case studies correspond to chapters in the main textbook (three cases per chapter), the reader approaches each case as they would present in life, symptom-first. Illustrated throughout with full color gross and histopathological photographs as well as
