Diagnostic Pediatric Hematopathology is unique in providing an accurate and up-to-date guide to the diagnosis of benign and malignant hematologic disorders of childhood. The text discusses the development of the hematopoietic and lymphoid systems - and how this affects normal and abnormal findings in children at various ages. Also examined are the morphologic, immunophenotypic, cytogenetic, and molecular genetic characteristics of most pediatric-specific hematologic diseases. This is an excellent reference that ensures accurate diagnoses when evaluating peripheral blood, bone marrow, and lymph nodes of children. The text is written by a team of experienced pediatric hematopathologists and clinical scientists drawn from major academic children's hospitals in the United States, Europe, and Canada. It will be a valuable tool in the every day practice of pathologists, pediatric pathologists, and hematopathologists, and a ready educational resource for fellows, pathology residents, medical students, clinical scientists in the field, and pediatric hematologists/oncologists.

As the definitive diagnostic atlas of the diseases of the hematopoietic system, the Atlas of Hematopathology appeals to a wide range of people who are being trained in a variety of medical fields or practicing as non-hematopathologists, and therefore, are looking for a book which can provide information in a clear, focused format, with no excessive text or details. The atlas offers effective guidance in evaluating specimens from the lymph nodes, bone marrow, spleen, and peripheral blood, enabling clinicians to deliver more accurate and actionable pathology reports. Practicing physicians and those in pathology and hematology training also gain a better understanding of the nature of hematologic disorders and improve their diagnostic skills along the way. Taking a unique multi-disciplinary approach, the book covers conventional histopathology and cytopathology, as well as all important complementary diagnostic tests, such as immunophenotyping (immunohistochemical stains and flow cytometry), karyotyping, FISH and DNA/molecular studies. It offers concise textual and extensive visual coverage of both neoplastic and non-neoplastic hematology disorders, with the neoplastic hematology sections presented according to the most recent WHO classifications. There is also an introduction to the normal structures of hematopoietic tissues and the various multidisciplinary techniques. The atlas contains more than 900 high-quality color images that mirror the findings that fellows and clinicians encounter in practice. It provides information in a quick, simple and user-friendly manner, attracting those who are in training or are not considered experts in the field. Residents, fellows, practicing clinicians, and researchers in pathology, hematology, hematology/oncology, as well as graduate students in pathology and other clinicians working in clinical hematology laboratories will all find it useful.
