## *how the brain evolved language*

Donald Loritz describes the history of the discovery that language is controlled by the brain, and thus somehow located in it, and the subsequent efforts of scientists in many areas - linguistics, psychology, neurology, computer science, and the new field at their intersection, cognitive science - to understand what language is, how the brain "contains" it, and how both language and this

One key role is in the growth of nerve cells and the connections they make with other nerve cells during learning and development. Mutations in the FOXP2 gene interfere with the part of the brain responsible for language development, leading to the language problems seen in this family. The evolution of FOXP2
