Achieving Sustainable Energy Targets in Bangladesh

The product segment is sub-segmented into processors, sensors, connectivity ICs, memory devices, logic devices, and others. The end user segment is sub-segmented into consumer electronics ...

A wide variety of professionals find themselves intimately involved in the criminal justice system; firefighters, emergency medical providers, nurses, physicians, public health personnel, environmental professionals, public works personnel, and many others. No previous work has attempted to address the criminal justice system in terms relevant to these professionals. Interface: A Guide for Professionals Supporting the Criminal Justice System explains the system, provides the reader with guidance to documenting incidents so that the data is both of value to the professional in the future and for use by the other components of the system. Further, this volume presents evidence from the aspect of these professionals, their needs in handling evidence, and basics of collection and preservation for those instances where it falls to them to do so. Professionals, not familiar with safety issues outside of their fields of expertise, have been injured or died as a result of exposure to hazards; it also educates them to considerations for their safety when out of their area of comfort. In addition, this book considers the role of the professional as interviewer, and provides basic guidance to this often valuable skill. Finally, Interface attempts to make the professional knowledgeable and comfortable in the courts, especially on the stand, where the professional may appear as a witness or even as an expert.

Course OverviewThis course describes the role, design, and functions of Emergency Operations Centers and their relationships as components of a multi-agency coordination system. The course contains disaster-related examples, activities and case studies that relate to EOC's and multi-agency coordination systems at the local, state and federal levels of government.Course Objectives:At the end of the course, students should be able to: *Relate EOC operations to National Incident Management System (NIMS) requirements.*Describe the role that EOCs play in overall multiagency coordination.*Describe the relationship between the EOC and the on-scene Incident Command System (ICS) structure.*Identify staffing, information, systems, and equipment needs at the EOC.*Determine whether participants' EOC organizations are conducive to effective coordination.*Identify potential alternate locations suitable for EOC operations should the primary EOC facility become damaged or inoperable.*Create a test, training and exercise plan for critical EOC operations.*Develop a strategy and schedule for reviewing EOC resource requirements and technology needs.

This guidance was developed in coordination with Federal, State, tribal, and local Public Information Officers (PIOs). The goal of this publication is to provide operational practices for performing PIO duties within the Incident Command System (ICS). It offers basic procedures to operate an effective Joint Information System (JIS). During an incident or planned event, coordinated and timely communication is critical to effectively help the community. Effective and accurate communication can save lives and property, and helps ensure credibility and public trust. This Basic Guidance for Public Information Officers provides fundamental guidance for any person or group delegated PIO responsibilities when informing the public is necessary. The guidance also addresses actions for preparedness, incident response, Joint Information Centers (JICs), incident recovery, and Federal public information support. The guidance material is adaptable to individual jurisdictions and specific incident conditions.

Data Mining: Concepts and Techniques provides the concepts and techniques in processing gathered data or information, which will be used in various applications. Specifically, it explains data mining and the tools used in discovering knowledge from the collected data. This book is referred as the knowledge discovery from data (KDD). It focuses on the feasibility, usefulness, effectiveness, and scalability of techniques of large data sets. After describing data mining, this edition explains the methods of knowing, preprocessing, processing, and warehousing data. It then presents information about data warehouses, online analytical processing (OLAP), and data cube technology. Then, the methods involved in mining frequent patterns, associations, and correlations for large data sets are described. The book details the methods for data classification and introduces the concepts and methods for data clustering. The remaining chapters discuss the outlier detection and the trends, applications, and research frontiers in data mining. This book is intended for Computer Science students, application developers, business professionals, and researchers who seek information on data mining. Presents dozens of algorithms and implementation examples, all in pseudo-code and suitable for use in real-world, large-scale data mining projects Addresses advanced topics such as mining object-relational databases, spatial databases, multimedia databases, time-series databases, text databases, the World Wide Web, and applications in several fields Provides a comprehensive, practical look at the concepts and techniques you need to get the most out of your data
