What if schools, from the wealthiest suburban nursery school to the grittiest urban high school, thrummed with the sounds of deep immersion? More and more people believe that can happen - with the aid of video games. Greg Toppo's *The Game Believes in You* presents the story of a small group of visionaries who, for the past 40 years, have been pushing to get game controllers into the hands of learners. Among the game revolutionaries you'll meet in this book: *A game designer at the University of Southern California leading a team to design a video-game version of Thoreau's *Walden Pond*. *A young neuroscientist and game designer whose research on "Math Without Words" is revolutionizing how the subject is taught, especially to students with limited English abilities. *A Virginia Tech music instructor who is leading a group of high school-aged boys through the creation of an original opera staged totally in the online game *Minecraft*. Experts argue that games do truly "believe in you." They focus, inspire and reassure people in ways that many teachers can't. Games give people a chance to learn at their own pace, take risks, cultivate deeper understanding, fail and want to try again—right away—and ultimately, succeed in ways that too often elude them in school. This book is sure to excite and inspire educators and parents, as well as provoke some passionate debate.

Journey through the inner workings of PC games with *Game Hacking*, and leave with a deeper understanding of both game design and computer security.

At a time when globalization and technology are dramatically altering the world we live in, is education reform in the United States headed down the right path? Are schools emphasizing the knowledge and skills that students need in a global society--or are they actually undermining their strengths by overemphasizing high-stakes testing and standardization? Are education systems in China and other countries really as superior as some people claim? These and other questions are at the heart of author Yong Zhao's thoughtful and informative book. Born and raised in China and now a distinguished professor at Michigan State University, Zhao bases many of his observations on firsthand experience as a student in China and as a parent of children attending school in the United States. His unique perspective leads him to conclude that "American education is at a crossroads" and "we need to change course" to maintain leadership in a rapidly changing world. To make his case, Zhao explains * What's right with American education; * Why much of the criticism of schools in the United States has been misleading and misinformed; * Why China and other nations in Asia are actually reforming their systems to be more like their American counterparts; * How globalization and the "death of distance" are affecting jobs and everyday life; and * How the virtual world is transforming the economic and social landscape in ways far more profound than many people realize. Educators, policymakers, parents, and others interested in preparing students to be productive global citizens will gain a clear understanding of what kinds of knowledge and skills constitute "digital competence" and "global competence," and what schools can--and must--do to meet the challenges and opportunities brought about by globalization and technology.

This book is an introduction to semisimple Lie algebras; concise and informal, with numerous exercises and examples.

This accessible autobiography is the true story of one girl's determination to hold her family together during one of the most terrifying eras of the twentieth century. It's 1966, and twelve-year-old Ji-li Jiang has everything a girl could want: brains, friends, and a bright future in Communist China. But it's also the year that China's leader, Mao Ze-dong, launches the Cultural Revolution—and Ji-li's world begins to fall apart. Over the next few years, people who were once her friends and neighbors turn on her and her family, forcing them to live in constant terror of arrest. When Ji-li's father is finally imprisoned, she faces the most difficult dilemma of her life. A personal and painful memoir—a page-turner as well as excellent material for social studies curricula—*Red Scarf Girl* also includes a thorough glossary and pronunciation guide. Supports the Common Core State Standards

"In an attempt to reconstruct an elusive aspect of the medieval Chinese imagination, *The Eminent Monk* examines biographies of Chinese Buddhist monks, from the uncompromising ascetic to the unfathomable wonder-worker. The book treats representations of asceticism in biographies of Chinese monks, focusing particularly on attitudes toward sex, food, and clothing. It analyzes the image of the Buddhist thaumaturge in these biographies, including the monk's relationship to supernormal powers, spells, and miracles. Finally, it mines the hagiography for clues to monastic attitudes toward scholarship, including a discussion of education in the monasteries, debate, and the constraints on intellectual exchange within the monastic community." "While analyzing images of the monk in medieval China, the author addresses some questions encountered along the way: What are we to make of accounts in "eminent monk" collections of deviant monks who violate monastic precepts? Who wrote biographies of monks and who read them? How did different segments of Chinese society

contend for the image of the monk and which image prevailed?" "By placing biographies of monks in the context of Chinese political and religious rhetoric, *The Eminent Monk* explores both the role of Buddhist literature in Chinese history and the monastic imagination that inspired this literature."--BOOK JACKET. Global Issues in Education bridges the discourse on globalization and education with international studies on race, class, gender, ethnicity, culture, and multiculturalism. The contributors to this volume address educational challenges of post-colonial Ghana, the United Arab Emirates, the Caribbean, China, and Germany juxtaposed against Western education in the United Kingdom and the United States. They synthesize macrosociology with educational research, which provides readers with the background, core knowledge, and global focus that is needed to understand international issues, as well as deal with diversity in the classroom. *Global Issues in Education* also addresses the need for additional research that makes the connections between the geopolitical economy and education, and it does this with a focus on the link to culture, ethnicity, and education.
