A wearable plush peanut butter jar, hot-roller cape and couture ... hiring seamstresses and sending sketches back and forth to the Federation de la Haute Couture et de la Mode in Paris.

Some vols. include supplemental journals of "such proceedings of the sessions, as, during the time they were depending, were ordered to be kept secret, and respecting which the injunction of secrecy was afterwards taken off by the order of the House."

Investigates the chemistry and bioactivity of the peanut as a food ingredientClarifies the causes of health effects in the human diet, both positive and negativePresents technical strategies to increase peanuts' value and reduce risks With the peanut representing an ever-increasing component of the global diet, the current book presents a scientific analysis of the two main and dichotomous properties of peanuts: allergenicity and health. The volume provides a technical explanation of the bioactive nutrients and dietary benefits of the peanut. It also reviews and analyzes the evidence implicating peanuts as a food allergen. Moving beyond nutritional science to food technology and engineering, the book demonstrates how genetic, pre-harvest, post-harvest and processing technologies can be applied to increase the nutraceutical value of peanuts and mitigate their risks.

Groundnuts (peanuts) are of great economic importance internationally. This book provides thorough coverage of all aspects of the crop, each chapter being written by experts in particular areas. The book will be invaluable to all those involved with the group, particularly agronomists, plant scientists and food scientists.

Seeds provide more than half of the world's intake of dietary protein and energy and thus are of immense economic, cultural and nutritional importance. Proteins can account for up to 40% of the dry weight of various types of seeds, thereby making a large contribution to the nutritional quality and processing properties of seeds. It is, therefore, not surprising that seed proteins were among the first plant components to be systematically studied, some 250 years ago, and have been a major focus of research over the past 100 years. The properties and behaviour of seed proteins pervade modern life in numerous ways. For example, legume and cereal proteins are used'in the production of a wide range of meat-free foods; the process of bread-making is dep-ndent on the physical chemical properties of wheat seed proteins; and in developed, as well as developing, countries, nutritional deficiencies among vegetarian diets are avoided through balancing legume and cereal seeds as sources of dietary proteins. Understanding seed proteins, in order to improve their composition and properties and to increase their concentrations, will thus continue to be an important research objective for the future. The present volume represents the culmination of a long-discussed plan of the editors, to bring together the best international authorities in order to compile a definitive monograph on biological, biochemical, molecular and genetic aspects of seed proteins.

This book explores the recent advances and integrations in molecular technology in food research platforms, which have revolutionized the way we discover and trace potential allergens in our food and drugs and how we utilize that for diagnosis and management. These different technologies for global allergenomic profiling in different kinds of food are discussed, including mass spectrometry, chromatography, and nuclear magnetic resonance. The book also addresses multiomics research with bioinformatics strategies in food allergy in terms of allergen characterization and quantitation, and covers applications in food allergy research from discovery to routine analysis.

This book is one of three volumes that are an expansion of Mycotoxins in Foodstuffs, Second Edition, and it focuses on cocoa, coffee, fruits and fruit products, medicinal plants, nuts, spices, and wine. In addition all foodstuffs of plant origin except cereals and cereal products are covered. Mycotoxins in Plants and Plant Products – Cocoa, Coffee, Fruits and Fruit Products, Medicinal Plants, Nuts, Spices, Wine comprises: More than 280 new publications and 900 publications in all Each item includes "Co-contamination", showing the co-occurrence of mycotoxins in a foodstuff, where possible Each item includes "Further contamination", describing the same or further foodstuff/s with its/their mycotoxins documented, where possible Single chapter overview with all mycotoxins and their foodstuff-spectrum Single chapter overview with each single foodstuff and its mycotoxin-spectrum Separate list of the articles dealing with conventionally and organically produced foodstuffs and their mycotoxin contamination Numerical and Alphabetical Bibliography
