Pulmonary hypertension is characterized by a mean pulmonary artery pressure greater than 25mmHg at rest. Pulmonary hypertension is divided into groups 1 to 5, according to the underlying cause. Group 1 diseases are characterized by plexogenic pulmonary arteriopathy, which occurs through nitric oxide, endothelin, and prostacyclin pathways. Investigations for diagnosis include echocardiography ...

Pulmonary hypertension - Oxford Medicine
Pulmonary arterial hypertension (PAH), is a rare and complex disease, associated with many different medical conditions, which is caused by a growth of cells lining the inside of the lung arteries, resulting in high pressure in areas of the body.

Pulmonary Hypertension - UCL Discovery
Acute pulmonary hypertension (PH) is common in ICU patients, particularly in septic shock, acute respiratory distress syndrome (ARDS), pulmonary embolism, and cardiac heart failure. Although many patients with lung diseases develop chronic PH, primary pulmonary arterial hypertension is less frequent, but still can be observed in ICU patients.
