This toolkit is to offer a practical methodology to government officials and staff from development organizations on how to identify and assess laws and regulations that affect international trade and investment in the services sector.

How regulations are implemented and enforced, and how compliance is ensured and promoted, are critical determinants of whether a regulatory system is working as intended. Inspections are one of the most important ways to enforce regulations and to ensure regulatory compliance. Based on the 2014 ...

This book comprehensively investigates the challenges to Myanmar's access to the global market. Myanmar is a late entrant in the global trade and investment scenario after years of isolation. However, it has large untapped potentials for trade and investment in minerals, agro and forest based industries, other labour intensive industries, services like tourism, IT, etc. Different chapters of the book explore the implication of democratic transition of Myanmar, the progress of Myanmar's industry and infrastructure, its international linkages and feasible options for integrating more in regional economic groups and also analyses how far Myanmar could exploit the global value chain. Although a number of reports have discussed sector specific prospects of Myanmar, this book is an authoritative work on these aspects for policy planners, academicians, researchers as well as potential investors.

Through country case studies as well as econometric analysis, this book attempts to identify the factors that have helped developing countries succeed in exporting services. It examines strategies that have been successful as well as those that have not delivered expected results..

This Toolkit provides a framework, guidelines, and set of practical tools to conduct an analysis and diagnostic of trade competitiveness in the services sector and to identify both the main constraints to improved competitiveness and the appropriate policy responses.

Regulatory Impact Analysis (RIA) is a fundamental tool to help governments to assess the impacts of regulation. RIA is used to examine and measure the likely benefits, costs and effects of new or existing regulation. The implementation of RIA ...

This Research Handbook explores the latest frontiers in services trade by drawing on insights from empirical economics, law and global political economy. The world's foremost experts take stock of the learning done to date in services trade, explore policy questions bedeviling analysts and direct attention to a host of issues, old and new, confronting those interested in the service economy and its rising salience in cross-border exchange. The Handbook's 22 chapters shed informed analytical light on a subject matter whose substantive remit continues to be shaped by rapid evolutions in technology, data gathering, market structures, consumer preferences, approaches to regulation and by ongoing shifts in the frontier between the market and the state.

Factoring health and related costs into decision making is essential to confronting the nation's health problems and enhancing public well-being. Some policies and programs historically not recognized as relating to health are believed or known to have important health consequences. For example, public health has been linked to an array of policies that determine the quality and location of housing, availability of public transportation, land use and street connectivity, agricultural practices and the availability of various types of food, and development and location of businesses and industry. *Improving Health in the United States: The Role of Health Impact Assessment* offers guidance to officials in the public and private sectors on conducting HIAs to evaluate public health consequences of proposed decisions -- such as those to build a major roadway, plan a city's growth, or develop national agricultural policies -- and suggests actions that could minimize adverse health impacts and optimize beneficial ones. Several approaches could be used to incorporate aspects of health into decision making, but HIA holds particular promise because of its applicability to a broad array of programs, consideration of both adverse and beneficial health effects, ability to consider and incorporate various types of evidence, and engagement of communities and stakeholders in a deliberative process. The report notes that HIA should not be assumed to be the best approach to every health policy question but rather should be seen as part of a spectrum of public health and policy-oriented approaches. The report presents a six-step framework for conducting HIA of proposed policies, programs, plans, and projects at federal, state, tribal, and local levels, including within the private sector. In addition, the report identifies several challenges to the successful use of HIA, such as balancing the need to provide timely information with the realities of varying data quality, producing quantitative estimates of health effects, and engaging stakeholders.

The 'Trade and Transport Facilitation Assessment' (TTFA) is a tool for identifying inefficiencies in international supply chains that limit a country's ability to compete in international trade. The TTFA examines problems that affect not only exports competitiveness, but also the ability to import and distribute inputs to production and consumer goods. This new TTFA toolkit was developed to meet the growing demand for facilitation and logistics reforms in an environment of increasing global competition and expanded trade in intermediate goods. It reflects practical experience and the change in the nature of demand from developing countries. The TTFA focuses on simplification and harmonization of trade-related procedures and identifies the opportunities for improving logistics services, infrastructure, and the overall performance of specific supply chains. It also outlines practices to develop plans of action with proper interactions with government agencies and stakeholders.

This Toolkit provides an overall framework with practical tools and information to help policymakers design and implement corporate governance reforms for state-owned enterprises. It concludes with guidance on managing the reform process, in particular how to prioritize and sequence reforms, build capacity, and engage with stakeholders.
