This book constitutes the refereed proceedings of the 15th International Conference entitled Beyond Databases, Architectures and Structures, BDAS 2019, held in Ustroń, Poland, in May 2019. It consists of 26 carefully reviewed papers selected from 69 submissions. The papers are organized in topical sections, namely big data and cloud computing; architectures, structures and algorithms for efficient data processing and analysis; artificial intelligence, data mining and knowledge discovery; image analysis and multimedia mining; bioinformatics and biomedical data analysis; industrial applications; networks and security.

Details infallible techniques for designing electronic hardware to withstand severe thermal environments. Using both SI and English units throughout, it presents methods for the development of various reliable electronic systems without the need of high-speed computers. It also offers mathematical modeling applications, using analog resistor networks, to provide the breakup of complex systems into numerous individual thermal resistors and nodes for those who prefer high-speed digital computer solutions to thermal problems.

Computer Science and Convergence is proceedings of the 3rd FTRA International Conference on Computer Science and its Applications (CSA-11) and The 2011 FTRA World Convergence Conference (FTRA WCC 2011). The topics of CSA and WCC cover the current hot topics satisfying the world-wide ever-changing needs. CSA-11 will be the most comprehensive conference focused on the various aspects of advances in computer science and its applications and will provide an opportunity for academic and industry professionals to discuss the latest issues and progress in the area of CSA. In addition, the conference will publish high quality papers which are closely related to the various theories and practical applications in CSA. Furthermore, we expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject. The main scope of CSA-11 is as follows: - Mobile and ubiquitous computing - Dependable, reliable and autonomic computing - Security and trust management - Multimedia systems and services - Networking and communications - Database and data mining - Game and software engineering - Grid, cloud and scalable computing - Embedded system and software - Artificial intelligence - Distributed and parallel algorithms - Web and internet computing - IT policy and business management WCC-11 is a major conference for scientists, engineers, and practitioners throughout the world to present the latest research, results, ideas, developments and applications in all areas of convergence technologies. The main scope of WCC-11 is as follows: - Cryptography and Security for Converged environments - Wireless sensor network for Converged environments - Multimedia for Converged environments - Advanced Vehicular Communications Technology for Converged environments - Human centric computing, P2P, Grid and Cloud computing for Converged environments - U-Healthcare for Converged environments - Strategic Security Management for Industrial Technology - Advances in Artificial Intelligence and Surveillance Systems

Experience turn of the century life in a small Midwestern town where the visit of President McKinley causes reporters to miss a nearby manned flight more than four years before the Wright Brothers. Attend the last concert of Buddy Holly and Ritchie Valens in Iowa before their tragic plane crash in 1959. Witness the disruption of family life when sex scandals within their church challenge their beliefs and values. Observe how an advisor to Secretary of State Colin Powell loses the respect of his extended family that disputes positions both have taken during the 2003 invasion of Iraq. Feel the psychological trauma, and occasional renewal, of those whose lives have been upset by unexpected career altering circumstances. These and other events are captured in this collection of short stories where real and fictional characters interact in historically meaningful situations.

The Encyclopedia of GIS provides a comprehensive and authoritative guide, contributed by experts and peer-reviewed for accuracy, and alphabetically

arranged for convenient access. The entries explain key software and processes used by geographers and computational scientists. Major overviews are provided for nearly 200 topics: Geoinformatics, Spatial Cognition, and Location-Based Services and more. Shorter entries define specific terms and concepts. The reference will be published as a print volume with abundant black and white art, and simultaneously as an XML online reference with hyperlinked citations, cross-references, four-color art, links to web-based maps, and other interactive features.

Integrated circuits (ICs) are chips, or small electronic devices found in practically every type of application and machine, including microprocessors, audio/video equipment, automobiles, etc. Regardless of their context, most modern integrated circuits require both analog (linear) and digital processing, so designers must have a solid foundation in both. Written for beginning circuit designers and electrical engineering students, this book covers the basics of both linear and digital circuits. This unique approach also makes it useful as a reference for practicing engineers. The first seven chapters are devoted to analog integrated circuits, including ideal operational amplifier (op-amp) characteristics, AC and DC characteristics of op-amp, and op-amp applications. After a chapter on the principles involved in analog-to-digital and digital-to-analog converters, the last four chapters are devoted to the fundamentals of digital system design from the ground up. This section covers many specific digital circuits, including Adder, ROM, and EPROM, microprocessors, and microcontrollers. The last chapter explains logic families, which form the fundamentals of logic gates.
