Second Language Learning and Language Teaching provides an introduction to the application of second language acquisition research to language teaching. Assuming no previous background in second language acquisition or language teaching methods, this text starts by introducing readers to the basic issues of second language acquisition research. It then examines how people learn particular aspects of the second language, such as grammar, vocabulary, pronunciation and the writing system, and at the strategies they adopt in their learning and the differences between individuals. Final chapters look at second language learning in a broader context – the goals of language teaching and how teaching methods relate to SLA research. This newly updated fifth edition builds on the comprehensive scope of earlier editions while also addressing more recent developments in the field, particularly multilingual approaches to language teaching.

Second Language Acquisition: introduces the key areas in the field, including multilingualism, the role of teaching, the mental processing of multiple languages, and patterns of growth and decline explores the key theories and debates and elucidates areas of controversy gathers together influential readings from key names in the discipline, including: Vivian Cook, William E. Dunn and James P. Lantolf, S.P. Corder, and Nina Spada and Patsy Lightbown.

The Second Language Learning Processes of Students with Specific Learning Difficulties is the only recent book available to offer a detailed and in-depth discussion of the second language learning processes of students with specific learning difficulties (SpLDs). It summarizes research advances in the fields of cognitive and educational psychology and integrates them with recent studies in the area of second language acquisition (SLA). Thus the book is relevant not only to readers who are particularly interested in the role of specific learning difficulties in learning additional languages, but also to those who would like to understand how individual differences in cognitive functioning influence SLA. The book focuses on four important areas that are particularly relevant for language learners with SpLDs: the processes of SLA in general and the development of reading skills in particular, the effectiveness of pedagogical programs, the assessment of the language competence of students with SpLDs and identifying SpLDs in another language. The book also views learners with SpLDs in their social and educational contexts and elaborates how the barriers in these contexts can affect their language learning processes. This is an excellent resource for language teachers, students, and researchers in the areas of second language acquisition and applied linguistics.

A survey and analysis of second language theory discusses the development of ideas in this expanding area of language studies. It looks at the implications of these ideas and directions for future research. Contains study questions and activities as well as practical guidelines on the use of available research resources.

Winner of the 2019 AAAL First Book Award Racialized Identities in Second Language Learning: Speaking Blackness in Brazil provides a critical overview and original sociolinguistic analysis of the African American experience in second language learning. More broadly, this book introduces the idea of second language learning as "transformative socialization": how learners, instructors, and their communities shape new communicative selves as they collaboratively construct and negotiate race, ethnicity, gender, sexuality, and social class identities. Uju Anya's study follows African American college students learning Portuguese in Afro-Brazilian communities, and their journeys in learning to do and speak blackness in Brazil. Video-recorded interactions, student journals, interviews, and writing assignments show how multiple intersecting identities are enacted and challenged in second language learning. Thematic, critical, and conversation analyses describe ways black Americans learn to speak their material, ideological, and symbolic selves in Portuguese and how linguistic action reproduces or resists power and inequity. The book addresses key questions on how learners can authentically and effectively

participate in classrooms and target language communities to show that black students' racialized identities and investments in these communities greatly influence their success in second language learning and how successful others perceive them to be.

This book provides an overview of second language (L2) motivation research in a specific European context: Hungary, which has proved to offer an important laboratory for such research, as a number of major political changes over the past 30 years have created a changing background for L2 learning in an increasingly globalized world. The book provides an overview of theoretical research on L2 motivation, together with detailed information on large-scale L2 motivation studies in Hungary. Further, it presents a meta-analysis of the most important investigations, and qualitative data on teachers' views regarding success in L2 learning. In turn, the interdisciplinary nature of L2 motivation is taken into account and relevant antecedent constructs to L2 motivation are investigated. Lastly, the book outlines possible future directions for L2 motivation research.

This book explores theories and pedagogies in the L2 classroom that have led to an understanding of how non-native languages are taught and learned. Featuring a diverse set of perspectives from researchers and language educators from around the globe, this book highlights important theoretical and practical underpinnings of the L2 classroom—discussions on what has worked and why. Some examples of these topics include: online and nonverbal communication, peace literacy, learning behaviors, high-impact practices, pragmatic awareness, study abroad, implicit and explicit teaching, motivation, and more. One mission of this book is to appreciate a diverse array of L2 teaching practices with sound theoretical underpinnings and universal implications for L2 classrooms. The chapter contributions are the result of an open call for studies that highlight practical innovative approaches in L2 teaching and learning and expand the avenues of exploration available within their theoretical frameworks. More specifically, the call for proposals sought to gather a diverse set of perspectives from researchers and language educators from various parts of the world in order to provide practical and thought-provoking insight on innovative approaches to L2 teaching. As such, the studies in this book all share a common goal that demonstrates the applicability of L2 teaching practices across languages, cultures, and regions. The book is intended to act as a valuable reference for language educators, practitioners, specialists, and anyone studying or wishing to gain an overview of successful teaching practices and learning nuances in the L2 classroom that cross all languages, cultures, and regions.

The insights, techniques and skills needed to understand why some adult students have difficulties with learning a second language are presented in this book. The author's premise is that what appears on the surface is often not the real source of the learner's difficulty. A correct diagnosis of the cause of the problem is important if intervention is to prove effective. The book presents a large number of theories and models of learning, and covers areas including: learning styles and personality dispositions; student motivation, self-efficacy and anxiety; and how to interview students.

Second Language Learning Theories is a clear and concise overview of the field of second language acquisition (SLA) theories. Written by a team of leading academics working in different SLA specialisms, this book provides expert analysis of the main theories from multiple perspectives to offer a broad and balanced introduction to the topic. The book covers all the main theoretical perspectives currently active in the SLA field and sets them in a broader perspective per chapter, e.g. linguistic, cognitive or sociolinguistic. Each chapter examines how various theories view language, the learner, and the acquisition process. Summaries of key studies and examples of data relating to a variety of languages illustrate the different theoretical perspectives. Each chapter concludes with an evaluative summary of the theories discussed. This third edition has been thoroughly updated to reflect the very latest research in the field of SLA. Key features include: a fully re-worked chapter on cognitive models of language and language learning a new chapter on information processing, including the roles of different types of memory and knowledge in language learning the addition of a glossary of key linguistic terms to help the non-specialist a new timeline of second language learning theory development This third edition takes account of the significant developments that have taken place in the field in recent years. Highly active domains in which theoretical and methodological advances have been made are treated in more depth to ensure that this new edition of Second Language Learning Theories remains as fresh and relevant as ever.

A clear and practical introduction to second language acquisition, written for students encountering the topic for the first time.
