How old a model is it?, my friend's Master 2500 of about 1982 vintage just has a foot bar that jams an asbestos block against what looks like a 4 or 5" cast iron pulley with no belt in it. There's also the oil filled clutches for direction reversal but they are mechanical too. I don't think there's an electric brake anywhere on it.

Colchester Master 2500—Electromagnetic Brake

The 4725 brake control utilizes time based actuation for applying braking power to the trailer brakes. The built-in digital display makes it easy for setting braking intensity. The braking force to the trailer can easily be adjusted from 5% to 99% for setting the exact percentage of brake power desired.

Hopkins Impulse Electric Brake Controller #47235

The electric brake assist that kicks on when you use the brake pedal. The wires to it were out right by the master cylinder on mine when i bought it but the hydrolic brakes seem to work just fine like that. Infact i have VERY good brakes on it. Juice brakes, not air.

Master Power Brakes has a new Electric Vacuum Pump Kit (PN AC9001K) that plays nicely with big cams because it provides that much needed vacuum for the brake booster, but it does so independently of any manifold vacuum source. This 440ci has a bit of a radical cam, and that meant a vacuum canister was needed for the power brakes.

Big Cams Are No Match For This Compact Vacuum Pump

When you press the brake pedal, the master cylinder turns the force applied into hydraulic pressure. The brake fluid is pushed around the braking system to the four wheels, with around 60% of the braking power going to the front wheels.

Citroën Brakes | Your Citroën Braking System—Citroën UK

If the parking brake is to be applied, the electric motor is actuated by the electromechanical parking brake control unit. The spindle is driven by the electric motor via the belt and swash plate gear mechanism. Through the rotary movement of the spindle, the thrust nut moves forwards on the spindle thread.
