The Effective Clinical Neurologist presents the most systematic guide available for the doctor or medical student learning the art of the neurological examination and treatment. The patient-centred method is presented in logical steps, walking the reader through the process in a clear and detailed, yet personal style. The authors begin by placing neurological medicine in its current cultural and economic environment and progress to presenting the specific process of interacting with the patient. This book is the only guide to the art of achieving optimal doctor-patient interaction and communication, which are essential to the practicing neurologist. The third edition of this classic reference is fully updated to include the impact of electronic communication and to incorporate the

many technological advances that can be applied to the neurological evaluation. Other changes in the environment in which the clinician practices include the changes in procedure brought about by managed care. This edition is organized into four parts, beginning with a section on the clinician-neurologist and the scope, methods, and uniqueness of this area of medicine. Part II focuses on the patient encounter - the taking of a history, systemic and neurological examination, interpretation of tests, giving the patient information, and conducting the "dismissal interview". Case examples illustrate the methods discussed. Part III presents the various types of encounters that occur, including those that involve inpatient care, outpatient care, consultations, and the inclusion of medical students and other trainees. Medico-legal aspects of neurological care are also presented. Part IV concludes with a

success on all sorts of standardized neurology examinations. Presented in a comprehensive question-and-answer format, with detailed rationales, *Comprehensive Review in Clinical Neurology* is a must-have for both aspiring and practicing neurologists and psychiatrists preparation to take the RITE, the American Board of Psychiatry and Neurology written exams, and various recertification exams.

Written by neurologists for neurologists, *Decision-Making in Adult Neurology* provides practical guidance when encountering patients whose clinical presentation is unfamiliar or complex, or whose treatment path is not completely certain. This useful handbook is filled with diagnostic and treatment algorithms that encourage you to think systematically and follow a logical sequence through the

Access Free The Effective Clinical Neurologist

steps necessary for efficient and effective decision-making. Outlines the key decision points in patient management, providing a wealth of systematic information that ensures you take into account the proper physical signs and test results that will guide your recommendations. Contains 119 algorithms covering symptoms and signs, specific neurologic conditions, vascular disorders, seizures, head trauma, neoplastic disease, peripheral nervous disorders, and muscle disease. Accompanies each algorithm with brief text that explains the significance of important decision points. Provides step-by-step decision-making guidelines for testing and management of paraneoplastic diseases, choice of initial MS therapy, evaluation of incidentally discovered MRI white matter lesions, management of asymptomatic carotid stenosis, and much more.
