The first book to be written on the Judge Rotenberg Center and their use of aversives in treatment for children with disabilities. For over twenty years, professionals in the field of disability studies have engaged in debates over the use of aversive interventions (such as electric shock) like the ones used at the Judge Rotenberg Center. Advocates and lawyers have filed complaints and lawsuits to both use them and ban them, scientists have written hundreds of articles for and against them, and people with disabilities have lost their lives and, some would say, lived their lives because of them. There are families who believe deeply in the need to use aversives to control their children's behavior. There are others who believe the techniques used are torture. All of these families have children who have been excluded from numerous educational and treatment programs because of their behaviors. For most of the families, placement at the Judge Rotenberg Center is the last resort. This book is a historical case study of the Judge Rotenberg Center, named after the judge who ruled in favor of keeping its doors open to use aversive interventions. It chronicles and analyzes the events and people involved for over thirty years that contributed to the inability of the state of Massachusetts to stop the use of electric shock, and other severe forms of punishment on children and adults with disabilities. It is a long story, sad and tragic, complex, filled with intrigue and questions about society and its ability to protect and support its most vulnerable citizens.

Maria McCutchen did not have time to be sick. With a husband who had just lost a job, two young sons, and a cross-country move on the horizon, who had time to be sick? Maria didn't have time for a common cold, let alone a major medical condition. But one day while shopping in the grocery store where she had shopped hundreds of times before, she couldn't find the milk. It was then she knew what she was feeling was more than just stress or exhaustion. There was something very wrong. After consulting a few doctors, Maria discovered she had a rare brain cyst known as a posterior fossa arachnoid cyst—a very large brain cyst. Hearing these cysts were normally asymptomatic was of little comfort, especially because she felt her mind and body slipping away more and more every day. Normal mental and physical functions were becoming harder to control. Even if the doctors didn't believe the cyst was a problem, she knew it was. It would take months of living inside a shell of a person that she'd become, months of living in a mental foggy and sometimes even physical pain, before she would finally get the medical attention she needed. It's All in Your Head chronicles her harrowing medical odyssey and her attempts to regain some sort of semblance of her old life after treatment.

The first volume in the new ?Plural? series, this publication seeks to critically dissect the term ?activism?, which today seems to have become a catchword for any woman?s empowerment through the arts, and reveal the diversity of practices and realities that it comprises. Presenting a range of critical insights, perspectives, and practices from artists, activists, and academics, it reflects on the role of feminist interventions in the field of contemporary art, the public sphere, and politics. In the process, it touches upon broader questions of cultural difference, history, class, economic standing, ecological issues, and sexual orientation, as well as the ways in which these intersect.
