The intensity of the strong force de-creases rapidly with distance, so that at distances more than about 10-14 m it is weaker than the elec-tromagnetic force.

n this chapter we will consider the behavior of trace elements, particularly in magmas, and in- troduce methods to model this behavior. Though trace elements, by definition, constitute only a small fraction of a system of interest, they provide geochemical and geological information out of proportion to their abundance.
